## Solo Project - Walking Simulator Write Up

This is a simple simulation/game in which you control a character and are able to walk around an arbitrary maze. There is no goal to playing this game other than to walk around and discover the maze. To play this game there are a few controls.

- To move forward: use the up arrow or W
- To move backward: use the back arrow or S
- To move right: use the right arrow or D
- To move left: use the left arrow or A
- To look around: point the mouse in the direction that you would like to look in
  - Ex: moving the mouse up will make the character look up

Use these simple controls to walk around the maze and get a feel for using basic movement and visual controls. Have fun!
